iut Nord Franche-Comté

3RD YEAR COMPUTER SCIENCE B.U.T.

The B.U.T. in Computer Science trains professionals capable of designing, creating and deploying digital solutions adapted to the transformation needs of organisations.

The programme is based on the acquisition of fundamental knowledge in development, systems and network administration, databases and project management.

A thorough awareness of current issues (data security, artificial intelligence, etc.) helps train professionals capable of meeting technological challenges.

Special attention is paid to the social, ethical and environmental issues related to digital technologies.

Bachelor's Degree

SKILLS

This course aims to develop six core IT graduate skills:

- Carrying out an application development
- Optimising computer applications
- Running complex communication computer systems
- Managing information data
- Conducting a project
- Working as part of an IT team

CAREERS

Graduates can hold positions such as:

Application designer-developer, Web developer, Mobile developer, IoT developer.

The program also opens the way to further studies in engineering schools or master's degrees.
